

# Understanding Different Types of Edits

## 1. Instructions

You will be given two versions of a sentence: before and after editing. It is your job to determine **one or more** categories that the sentence fits into.

For each version of the sentence, the red text indicates words that were removed, green text represents words that were added, and black words are words that were not changed.

There are definitions of each category, examples of each category with an explanation, and then 6 questions to answer.

Not knowing the answer is ok; part of this is understanding why certain categories are harder to understand than others.

These sentences come from PDFs. In order to make sentence more uniform, mathematical equations such as  $a \neq 0$  or  $\Sigma = \{\vec{v} = (v_1, v_2) \in \mathbb{R}^2\}$  have been replaced with [MATH].

Good luck!

## 2. Category Definitions

### 2.1. Edits that change meaning

**Elaboration:** Adds new information to a sentence such as a claim, piece of evidence, or explanation.

**Simplification:** Removes information such as a claim, a piece of evidence, or an explanation from the sentence.

## 2.2. Edits that don't change meaning

**Correction:** Fixes spelling, grammar or formatting without changing the meaning or specificity of a sentence. This includes changing a sentence to match conventions (*Fig.* instead of *Figure*, *one-dimensional* instead of *one dimensional*).

**Reading flow:** Makes or changes connections between different parts of the paper, changing the order in which a reader would move through the document. This includes adding or removing a reference to a figure, equation, or other section of a paper like an appendix or conclusion.

**Word usage:** Changes language, tone or style without changing the meaning of the sentence.

## 2.3. Edits that can't be labeled with another category

**Domain knowledge:** You need further understanding of the subject to know what categories best fit.

**PDF required:** The original PDF contains information not shown in the sentence, which is needed to pick out categories for an example.

**Other:** None of these labels fit.

# 3. Reference Examples

## 3.1. Question 1

Now, in order to reproduce the behavior of the projections of the exact Bohmian trajectories in the system subspace , we can consider the following simple trajectory model, which gathers both decoherence and loss of empty-slit information.

In order to observe such a behavior, we can further proceed with our model as follows.

Choose **one or more** categories, and write a sentence or two explaining your thoughts.

*Changes meaning:*

☐ Elaboration ☒ Simplification

*Doesn't change meaning:*

☐ Correction ☐ Reading flow ☒ Word usage

*Other:*

☐ Domain knowledge ☐ PDF required ☐ Other

Explanation:

- Removing **Now** is **word usage** because it doesn't change the claim, evidence, or specificity of the sentence. All it does is change the style/tone of the sentence.
- The other 3 changes are all **simplification** because the changes remove information from the sentences.

## 3.2. Question 2

**Then**, we can estimate the logical error rate **of the error rate** [MATH], which **is given by** [MATH] where [MATH], [MATH] and [MATH].

**Given fitting parameters** [MATH], [MATH], [MATH] and [MATH], we can estimate the logical error rate **for error rates** [MATH] **by replacing** [MATH] with [MATH], which **gives** [MATH] where [MATH], [MATH] and [MATH].

Choose **one or more** categories, and write a sentence or two explaining your thoughts.

*Changes meaning:*

☒ Elaboration ☐ Simplification

*Doesn't change meaning:*

☐ Correction ☐ Reading flow ☒ Word usage

Other:

- ☐ Domain knowledge      ☐ PDF required      ☐ Other

Explanation:

- Inserting **Given fitting parameters** [MATH], [MATH], [MATH] and [MATH] explains what conditions are necessary. This adds information to the sentence, which means this sentence is **elaboration**.
- Inserting **by replacing** [MATH] with [MATH] further details the process, adding information to the sentence, making it **elaboration** as well.
- Changing **is given by** to **gives** doesn't add or remove information from the sentence; rather, it changes the style/tone of the sentence: **word usage**.

### 3.3. Question 3

However, due to the interference quenching, the extent of this behavior is reduced in both space and time: in space because the interference effects are stronger for the innermost trajectories [which give rise to the central peaks in **Figure XX(a)**] and in time because the time-of-flight of the neutrons, [MATH], is **such that** [MATH].

However, due to the interference quenching, the extent of this behavior is reduced in both space and time: in space because the interference effects are stronger for the innermost trajectories [which give rise to the central peaks in **Fig. XX(a)**] and in time because the time-of-flight of the neutrons ([MATH] s) is **slightly larger than** [MATH].

Choose **one or more** categories, and write a sentence or two explaining your thoughts.

Changes meaning:

- ☐ Elaboration      ☐ Simplification

Doesn't change meaning:

- ☒ Correction      ☐ Reading flow      ☒ Word usage

Other:

☐ Domain knowledge

☒ PDF required

☐ Other

Explanation:

- Changing **Figure** to **Fig.** is a **correction** because it doesn't change the meaning or phrasing of the sentence.
- Changing **such that** to **slightly larger than** is **word usage** because it's a change in the sentence's phrasing, without changing meaning (note that this is because the original PDF shows that the [MATH] changes.)

This example is actually **PDF required** because the change from **such that** to **slightly larger than** is actually not a change in meaning. Since the equation inside the [MATH] tags changes, there is no difference in meaning between the sentences, and is simply **word usage**. Knowing that, this label is **PDF required**.

*Note: **PDF required** is a difficult label. If you can't tell what the label is, but if you could tell if you knew what was in [MATH] or XX, then it is **PDF required**.*

---

Categories: **reading flow**

### 3.4. Question 4

In the case [MATH], when a [MATH] error occurs, an [MATH] error and some Pauli errors always occur simultaneously (**Sec. XX**).

In the case [MATH], when a [MATH] error occurs, an [MATH] error and some Pauli errors always occur simultaneously (**see Appendix XX**).

*Choose **one or more** categories, and write a sentence or two explaining your thoughts.*

*Changes meaning:*

☐ Elaboration

☐ Simplification

*Doesn't change meaning:*

☐ Correction ☒ Reading flow ☐ Word usage

*Other:*

☐ Domain knowledge ☐ PDF required ☐ Other

Explanation:

- Changing from a **Sec.** to an **Appendix** changes the order in which the reader would read the paper, so it is **reading flow**.

### 3.5. Question 5

However, **with fermion-parity errors**, the outcome of the qubit-charge measurement may be incorrect.

However, **when [MATH] is finite**, the outcome of the qubit-charge measurement may be incorrect.

*Choose **one or more** categories, and write a sentence or two explaining your thoughts.*

*Changes meaning:*

☐ Elaboration ☐ Simplification

*Doesn't change meaning:*

☐ Correction ☐ Reading flow ☐ Word usage

*Other:*

☒ Domain knowledge ☐ PDF required ☐ Other

Explanation:

- Without knowing what **fermion-parity errors** are, it's impossible to know what the authors changed about the sentence. Since fermion-parity isn't common knowledge, this example is **domain knowledge**.

## 4. Unlabeled Examples

### 4.1. Question 1

Alternatively, one can choose to repeat the distillation circuit (the entangled state generation part) for once if a failure occurs.

Alternatively, one can choose to repeat the distillation circuit (the entangled-state generation part, [see Fig. XX](#)) for once if a failure occurs.

*Choose **one or more** categories, and write a sentence or two explaining your thoughts.*

*Changes meaning:*

- ☐ Elaboration ☐ Simplification

*Doesn't change meaning:*

- ☐ Correction ☐ Reading flow ☐ Word usage

*Other:*

- ☐ Domain knowledge ☐ PDF required ☐ Other

Explanation:

---

---

---

### 4.2. Question 2

Note that, in the coordinate representation and for an environment constituted by [MATH] particles, **equation (XX) should be obtained after integrating [MATH] over the 3[MATH] environment degrees of freedom, i.e., [MATH] with [MATH], [MATH] being a 3-dimensional vector.**

Note that, in the coordinate representation and for an environment constituted by [MATH] particles, Eq. (XX) becomes [MATH].

Choose **one or more** categories, and write a sentence or two explaining your thoughts.

*Changes meaning:*

- ☐ Elaboration ☐ Simplification

*Doesn't change meaning:*

- ☐ Correction ☐ Reading flow ☐ Word usage

*Other:*

- ☐ Domain knowledge ☐ PDF required ☐ Other

Explanation:

---

---

---

### 4.3. Question 3

Notice that despite the fact that there is no coherence here, trajectories do not cross the symmetry axis separating the regions covered by each slit.

Notice that despite there is no coherence (in the sense that the interference terms of the reduced density matrix have been damped out), trajectories do not cross the symmetry axis between the two slits because they obey Eq. (XX), which contains information about the two slits open simultaneously.

Choose **one or more** categories, and write a sentence or two explaining your thoughts.

*Changes meaning:*

- ☐ Elaboration ☐ Simplification

*Doesn't change meaning:*

☐ Correction

☐ Reading flow

☐ Word usage

*Other:*

☐ Domain knowledge

☐ PDF required

☐ Other

Explanation:

---

---

---

## 4.4. Question 4

Without **fermion-parity** errors, one can eliminate all errors by iterating distillation circuits to achieve fault-tolerant quantum computing.

Without **charge** errors, one can eliminate all errors by iterating distillation circuits to achieve fault-tolerant quantum computing.

Choose **one or more** categories, and write a sentence or two explaining your thoughts.

*Changes meaning:*

☐ Elaboration

☐ Simplification

*Doesn't change meaning:*

☐ Correction

☐ Reading flow

☐ Word usage

*Other:*

☐ Domain knowledge

☐ PDF required

☐ Other

Explanation:

---

---

---

## 4.5. Question 5

Unlike B16, we have simultaneously fit both the Spitzer and K2 data with both transit and Spitzer's systematic models, which has allowed us to reduce residual systematics **by which** the results of B16 **were biased**.

Unlike B16, we have simultaneously fit both the Spitzer and K2 data with both **the** transit model and Spitzer's systematic models, which has allowed us to reduce the residual systematics **that biased** the results of B16.

*Choose **one or more** categories, and write a sentence or two explaining your thoughts.*

*Changes meaning:*

- ☐ Elaboration ☐ Simplification

*Doesn't change meaning:*

- ☐ Correction ☐ Reading flow ☐ Word usage

*Other:*

- ☐ Domain knowledge ☐ PDF required ☐ Other

Explanation:

---

---

---

## 4.6. Question 6

**When [MATH] (no distillation), [MATH] and [MATH]; when [MATH], [MATH] can be obtained numerically by simulating the distillation circuit.**

Without the PP distillation, [MATH] and [MATH]; when the distillation is performed, [MATH] can be obtained numerically by simulating the distillation circuit.

Choose **one or more** categories, and write a sentence or two explaining your thoughts.
