

- Project Topic
- Name
- Date
- Department
- Advisor
- Abstract
 - summary of problem statement, objectives and methodology

- Background and Motivation
 - define problem statement and general area in which you are working
 - * using arxiv.org to create a large dataset of atomic edits
 - assess the shortcomings with existing knowledge and/or existing approach
 - * Chenao examines only a small subset of arxiv.org papers, and does not use them to improve the quality of machine generated text
 - Discuss previous related research in this area
 - * Chenhao's paper on arxiv edits, other papers on wiki edits and wiki atomic edits.
 - Include specific key facts about the problem at hand
 - * could use amount of data available that is not being taken advantage of.
 - highlight the importance of answering the problem
 - * show the improvements that previous data has led to in particular metrics. Also highlight the meaning of these metrics in real world situations, and potential downstream applications of such technology.
- Significance
 - discuss importances of research project. (seems quite similar to the previous point)

Significance

- Research Goals
 - discuss hypotheses of project and/or overall objectives
 - include what you hope to resolve after performing this research
 - if working in a research group with multiple investigators, indicate your individual contribution to the project
- Methodology
 - provide specific details in your proposed approach (kind of easy because I know nearly exactly how it's going to work)
- Timeline
 - Provide a table or chart outlining your full timeline for completing this project, including all tasks involved (taking 4999, writing thesis, etc)
 - include any work you have already completed for this research project (ask Mike about this)
- Brief personal statement
 - include information regarding your background in the field and how the project prepares you for your future career.
 - include a statement concerning any arrangements about resources required.

- List all references (should also be cited throughout the body)
